

Sweet talk or hard facts

Energy means a lot to your business – it's a pity to waste it. The high thermal efficiency of Alfa Laval plate heat exchangers, PHEs, enables you to recover and re-use costly energy. This can have an enormous impact on your results.

That's why the sugar industry is converting to PHEs. The investment brings huge benefits in terms of increased heat recovery and pays for itself in a short time. These are hard facts.

Consult Alfa Laval. You'll find we're much more than just sweet talk.
